

EnGagE Survey

This questionnaire is part of the on-going work of a pan-European Network EnGagE (CA17130), funded under the COST Action funding scheme of the European Union.

Among our aims are assessment and mapping of current status and practices in genetic testing and counselling for neurodevelopmental and psychiatric disorders so we, as network could propose and bring improvements in education and everyday practice.

The questionnaire is meant for you who, that in some way, is having a connection to psychiatric conditions, genetic testing, or counselling, either through your clinical work or through your research. Please complete the questionnaire and forward it to your colleagues and local relevant societies as well.

Survey takes only about 10 minutes. We hope you can take the time to fill in!
